

WP 400.50

Safety cage for pendulum impact tester

The illustration shows the WP 400 experimental unit together with the protective cover installed

Specification

- [1] safety device for notched bar impact tests
- [2] accessory for the WP 400 experimental unit

Technical data

LxWxH: 1100x300x1100mm
Weight: approx. 15kg

Scope of delivery

- 1 protective cover

Description

■ safety device for notched bar impact tests in WP 400

This protective cover is available as an accessory for the WP 400 experimental unit. The oscillating hammer or a breaking specimen in the Charpy notched bar impact test represent a potential hazard. Therefore the protective cover is strongly recommended as a safety device when carrying out notched bar impact tests.

The protective cover is bolted in place on the WP 400 experimental unit and forms a protected working area for conducting experiments. A door in the protective cover allows access to the working area. Two handles make it easier to transport the experimental unit.

WP 400.50

Safety cage for pendulum impact tester

Required accessories

WP 400

Impact test, 25Nm
