

ET 499.25

Cutaway model: 4-way reversing valve

Learning objectives/experiments

- function and design of an industrial 4-way reversing valve

Specification

- [1] cutaway model of a 4-way reversing valve

Technical data

Connection

- pressure side: Ø 8mm
- intake side: Ø 12,85mm
- weight: 0,35kg

Max. operating pressure

- 34bar
- Max. pressure difference for reversal

- 27,5bar

Min. pressure difference for reversal

- 1bar

Max. discharge gas temperature at valve inlet

- 122°C

Output data in kW for R22

- max. 3,5/min. 1,7

Solenoid coil

- voltage: 230V
- frequency: 50Hz
- output: 1W

Description

■ cutaway model of an industrial 4-way reversing valve

The 4-way reversing valve makes it possible to reverse the flow in a refrigerating plant and create a defrosting system. Reversing the direction of flow means the evaporator becomes the condenser during the defrost process.

The cutaway models show commercially available elements from refrigeration technology such as compressors, valves, dryers and suction line receivers. The cuts are made in such a way that the design details are clearly visible.

The larger models are clearly mounted on a base plate. Two handles make them easier to transport.

Scope of delivery

- 1 cutaway model
- 1 description
